20.0 Introduction

This Playbook contains the game's scenarios.

Some scenarios in USWC are one-sided affairs. C'est la guerre. However, scenarios have optional rules to help balance them for competitive play.

20.1 Scenario General Information

Play Time: It is estimated to take 15-30 minutes per turn depending on the scenario, rules knowledge, and the specific turn being played.

Countries: A unit or marker can move into, be placed in, or trace a path through a hex that is not marked as prohibited as per the FC's Terrain Key or per a rule.

Sequence of Play: Unless stated otherwise, a scenario begins with the Weather Phase of the first turn and ends when the last turn's Victory Check Phase is completed.

Example: *The Scenario Ends marker is in the Sep box. The Sep turn is played out and the scenario ends with the Victory Check made at the end of that turn.*

Victory Conditions: Unless stated otherwise, a faction wins if it meets its victory conditions in the Victory Check Phase of any turn.

Competitive Victory Conditions: Due to the one-sided nature of some of the scenarios, some scenarios have victory conditions to determine which player did better over multiple plays of a scenario.

Special Rules/Notes: A scenario may have a special rule or note that applies to it. If it conflicts with a rule in the Rulebook, the scenario rule/note is used.

Optional Play Balance Rules: If all players agree, one or more of a scenario's Optional Play Balance Rules may be used. All players must agree which specific rule is used before the scenario starts. If a rule conflicts with a rule in the Rulebook, the Play Balance rule is used.

Optional Play Balance Rules provide variation, change play balance, or simulate an alternative history. These rules are optional. You do not have to play with any of them. They are not additional rules to make the game be played "as it should be."

Reinforcements Entry: A counter that is set up on the Turn Track becomes available for use within a scenario. That turn is referred to as the counter's *Entry Turn*.

When a counter is removed from its Entry Turn box on the Turn Track, put it in the place listed in the *Location* column of its scenario Setup Table.

The turn a unit or marker enters play in a scenario is the designer's estimate of when that unit had an impact in the war. It is not necessarily the historical date of formation.

A counter is put on the Turn Track in the turn listed in the Entry-H column.

20.2 Scenario Standard Set Up

The following applies to all scenarios unless stated otherwise within a specific scenario.

20.2.1 Basic Set Up

Map: Lay out the indicated map(s).

Move/DRM Markers: If using the Movement Points or +/- DRM markers, put them on their respective tracks.

Turn Marker: On the Yr 1 row of the Turn Track, put the Turn marker in the month box corresponding with the first turn of the scenario. If a scenario's time frame goes into another year, e.g., Nov-42 to Jun-43, the marker starts in the Yr 1 row and moves to the Yr 2 row during play.

Scenario Ends: Put the Scenario Ends marker on the Turn Track corresponding with the last turn of the scenario.

Control Markers: Put Control markers (if any) in the listed cities.

Counters: Set up counters as listed in the scenario.

Production/National Will Markers: Unless stated otherwise, all of a country's Prod and Will markers are put in their Faction Card's respective Track matching the value listed.

Production: The value shown for a country is how many production points (9.1.1) it receives each turn. The initial number received may be modified by Scenario Special Rules.

- **NA:** means the country has unlimited production points and so does not track its expenditures.
- **#:** The number is how many production points the country receives regardless of any territorial losses in that country.
- **#/Factory:** The number is how many production points the country receives per friendly factory within that country.
- **# + #/Factory:** The number before the "+" symbol is the minimum number of production points the country receives. In addition, it receives the number points per friendly factory within that country.

Example: *A scenario lists France's Production as 6 + 2/Factory. Each turn France receives 6 production points plus 2 production points for each friendly factory in France. If there are four friendly factories in France, France's receives 14 production points (6 + 8).*

National Will: If "NA" is listed after a country's National Will, no Will is tracked for it during play. That country cannot collapse.

Units/Markers: Put a country- or faction-specific counter in its respective location as listed in its faction Setup Table or as indicated above. Markers that are not country or faction specific (e.g., Sorties) are kept aside to be used if/when they are needed.

Important: If a counter has an Entry-H date listed in its Setup Table, it is a reinforcement counter and is initially set up on the Turn Track in the listed date box.

20.2.2 Setup Table

The counters used and placed by a faction in a scenario are listed in its Setup Table. The following explains Setup Table terms.

Country: States the country or faction listed at the bottom of a counter. It is *not* necessarily where a counter is set up.

Counter ID: States the counter's historical ID or name. If a number appears before a name, it indicates the number of counters with that name.

Example: In the Poland 1939 scenario, the Western Faction Setup Table lists "2x Ground Support" in the Counter ID column. This means two counters with the name, Ground Support, on them.

Location: States where a counter is placed. Placement cannot violate stacking limits or movement prohibitions. If a unit cannot be placed in a location without violating a rule, put it in its Faction Card's Mobilization box.

- If a counter has no Entry-H date, put it in the location listed.
- If a counter has an Entry-H, put it on the Turn Track as a reinforcement counter. When it is removed from the Turn Track on its *Entry Turn*, put it in the location listed.

Example: In the France 1940 scenario, the German Airdrop marker's Entry Turn is Aug-40. When it is removed from the Turn Track's Aug-40 box, put it in the Faction Card's Axis Events box.

The following may appear in a Location box.

- ◇ #####: Put the counter in that hex number.
- ◇ **Events:** Put the counter in its Faction Card's Events box.
- ◇ **Mobilization:** Put the counter in its Faction Card's Mobilization box.
- ◇ **Sp Rules:** See the scenario's Special Rules for that faction to determine where to put the counter.

Entry-H: Put the counter in the respective Turn Track box as per Reinforcement Entry (15.1).

R (for Reduced): If "R" appears in this box, the unit is set up at reduced strength.

S (for Sorties or Supply): If a number appears in this box, mark the unit with that number of Sorties.

20.2.3 Free Setup

Reminder: Per 30.12 Writing Style, the term "a unit" does not limit the following to only one unit.

If all players agree, a faction may set up a unit in a hex of their choosing rather than the hex listed in its Setup Table. However, it must remain in the same country in which it is listed. In addition, a unit in a new location must be able to trace a supply line back to a Supply Source for that unit.

Example: In the Poland 1939 scenario, the Axis faction cannot put the German 14 unit in any hex in Poland. It also cannot put it in hex 3035. That hex is still in Germany, but the unit cannot trace a supply line back to a German Supply Source from that hex.

If using free setup, the Axis faction sets up all its units first, followed by the Western faction.

20.2.3.1 Free Setup Restrictions

- Only a unit listed as starting the scenario in a hex may be placed in another hex. Any other unit or marker is put in its Setup Table's location.
- A unit listed in the same hex as a fort must set up in that hex.
- The final placement of all units cannot violate stacking limits or be in a movement prohibited hex for that unit.

21.0 Scenarios

21.1 Poland 1939

This covers the German invasion of Poland.

21.1.1 Basics

Scenario Length: 1 turn. Sep 1939.

Maps Used: Poland

Victory Conditions: The Axis faction wins if Poland is conquered by the end of the Axis Operations Phase. Otherwise, the Western faction wins.

Control Markers: None at start

Special Rules/Notes:

- There is no Economy Phase or Strategic Movement Phase.

21.1.2 Axis Faction

Active Countries:

Germany: National Will = NA. Production = NA

Special Rules/Notes:

- Any rail hex in Germany on the western edge of the map is an Unlimited Supply Source for a German unit.

Optional Play Balance Rules:

Pro-Western:

- Put the Western SNAFU in the Faction Card's Western Events box.
- Polish units may be set up in any hexes in Poland. After they are set up, up to two German units may be moved to any hex in Germany and/or E. Prussia that are within two hexes of a Transport Line in those areas.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Germany	1	3032			
Germany	2	2434			
Germany	4	2430			
Germany	8	2731			
Germany	10	2932			
Germany	1 Pz	2331			
Germany	2 Pz	2831			
Germany	1 Luf	2334			
Germany	2 Luf	2932			

21.1.3 Western Faction

Active Countries:

Poland: National Will = 12. Production = NA

Special Rules/Notes: None

Setup:

Country	Counter ID	Location	Entry-H	R	S
Poland	Karpaty	2937			
Poland	Krakow	2934			
Poland	Lodz	2832			
Poland	Modlin	2535			
Poland	Narew	2436			
Poland	Pomrz	2432			
Poland	Poznan	2631			
Poland	Prusy	2734			
Western	2xGround Support	Events			

21.2 Scandinavia 1940

This covers the German invasion of Denmark and Norway.

21.2.1 Basics

Scenario Length: 2 turns. Apr 1940 to May 1940.

Maps Used: Scandinavia

Victory Conditions: The Axis faction wins if Denmark and Norway are conquered by the end of the final turn. Otherwise, the Western faction wins.

Control Markers: None at start

Special Rules/Notes:

- There is no Economy Phase or Strategic Movement Phase.
- When determining the weather for April, roll on the Apr (Mar Poor) row.
- Each Kiel Canal hexside in hex 2322 is treated like a river hexside.

Optional Play Balance Rules:

Pro-Axis:

- If the first turn's weather is not Fair, the second turn is Fair.

Pro-Western:

- If the first turn's weather is Fair, the second turn is Poor.
- Put the Western SNAFU in the Faction Card's Western Events box.
- Put the What if (yellow triangle) Denmark unit in the Faction Card's Western Mobilization box.

21.2.2 Axis Faction

Active Countries:

Germany: National Will = NA. Production = NA

Special Rules/Notes:

- The Surprise Attack marker can only be played to perform an Amphibious Invasion of Norway.
- Oslo (hex 1623) is the only eligible port that may be selected for amphibious invasion per 6.3.2.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Germany	1	2322			
Germany	10	2422			
Germany	1 Luf	2422			2
Germany	Airdrop	Events			
Germany	Surprise Attack	Events			

21.2.3 Western Faction

Active Countries:

Denmark: National Will = NA. Production = NA

Norway: National Will = NA. Production = NA

Special Rules/Notes:

Weather has a big impact on play balance in this scenario. If playing the Western faction, pray for rain.

- National Will markers are not used. Denmark is conquered if one of its cities is under Axis control. Norway is conquered if its capital is under Axis control.

Setup:

Country	Counter ID	Location	Entry-H	Entry-V	R	S
Denmark	1	2122				
Norway	1	1623				
Norway	2	1523				
Western	2xGround Support	Events				

21.3 France 1940

This covers the German invasion of Belgium, France, and Netherlands.

21.3.1 Basics

Scenario Length: 5 turns. May 1940 to Sep 1940.

Maps Used: France

Victory Conditions: The Axis faction wins if on any turn, Belgium, France, and Netherlands are conquered. Otherwise, the Western faction wins at the end of the last turn.

Competitive Victory Conditions: Play with the following changes:

- The Scenario Length is 4 turns. May 1940 to Aug 1940.
- May and June weather is Fair.
- At the end of the scenario, count the number of French cities controlled by the Axis and record the result for that player.
- Players switch factions and play again. The Axis player that achieved a higher count between games wins.

Control Markers: None at start

Special Rules/Notes:

- The Alsace-Lorraine Disputed Area is considered part of France.
- The hexes in Italy are prohibited for all purposes.

Optional Play Balance Rules:

Pro-Axis:

- If the first turn's weather is not Fair, the second turn is Fair.
- Put the Axis SNAFU in the Faction Card's Axis Events box.

Pro-Western:

- If the first turn's weather is Fair, the second turn is Poor.
- Put the Western SNAFU in the Faction Card's Western Events box.
- Put the What if (yellow triangle) Belgium and Netherlands units in the Faction Card's Western Mobilization box.

Fixed Weather:

- May and June weather is Fair.

21.3.2 Axis Faction

Active Countries:

Germany: National Will= NA. Production = NA

Special Rules/Notes:

- In the first turn's Operations Phase, the Axis faction must attack or move into Belgium, Netherlands, or France.
- The Axis faction cannot perform an Amphibious Invasion and it cannot put the Airdrop marker in Great Britain.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Axis	Strategic Move	Events			
Germany	Airdrop	Events	Aug-40		
Germany	Surprise Attack	Events	Aug-40		
Germany	1	3020			
Germany	2	2921			
Germany	4	2819			
Germany	6	2719			
Germany	7	3121			
Germany	8	2720			
Germany	9	2820			
Germany	10	2920			
Germany	1 Pz	2818			
Germany	2 Pz	2919			
Germany	1 Luf	2719			
Germany	2 Luf	2818			
Germany	3 Luf	2619			2

21.3.3 Western Faction

Active Countries:

Belgium: National Will = 2. Production = 1.

France: National Will = 20. Production = 7 + 2 per Factory.

Netherlands: National Will = 2. Production = 1.

UK: National Will = NA. Production = NA.

Special Rules/Notes:

- At the start of the scenario, a France ground unit located in the same hex as a fort sets up occupying it.
- At the end of the May-40 Axis Operations Phase, put the France 2 Air unit in a friendly city in France. Placement cannot violate Stacking Limits. Mark it with 4 Sorties. It has Full Supply.
- A UK air unit that performs an Air Rebase action must end its movement within three hexes of, or within, Great Britain.
Example: Hex 2814 is three hexes away; 2815 is not.
- The Western faction cannot perform an Amphibious Invasion into or adjacent to a port in Belgium or Netherlands. It can perform naval transport to a friendly port in Belgium or Netherlands.
- Only a ground unit in the Western Mediterranean Box can perform an Amphibious Invasion into or adjacent to Marseille. Also, a ground unit in Marseille cannot perform an Amphibious Invasion.
- A Belgian unit can move or retreat only into a hex in Belgium or Germany.
- A Netherlands unit can move or retreat only into a hex in Netherlands or Germany.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Belgium	1	2717			
France	Tanks	Events			
France	1	2815			
France	2	2917			
France	3	3017			
France	4	3018			
France	5	3019

UK	BEF	2814			
UK	Ftr Cmd	2611			
UK	Surprise Attack	Events	Jul-40		
Western	2x Ground Support	Events			
Western	Strategic Move	Events			

21.4 France 1941

This covers a hypothetical delay in the German invasion of Belgium, France, and Netherlands until 1941. While the Benelux forces have not changed (their countries maintained the policies that attempted not to antagonize Germany), France's mobilization and reorganization continued.

21.4.1 Basics

Scenario Length: 5 turns. May 1941 to Sep 1941.

Maps Used: France

Victory Conditions: The Axis faction wins if on any turn, Belgium, France, and Netherlands are conquered. Otherwise, the Western faction wins at the end of the last turn.

Competitive Victory Conditions: Play with the following changes:

- The Scenario Length is 4 turns. May 1941 to Aug 1941.
- May and June weather is Fair.
- At the end of the scenario, count the number of French cities controlled by the Axis and record the result for that player.
- Players switch factions and play again. The Axis player that achieved a higher count between games wins.

Control Markers: None at start

Special Rules/Notes:

- The Alsace-Lorraine Disputed Area is considered part of France.
- **Mediterranean Impact:** Each turn, at the beginning of the Economy Phase, the Axis faction rolls a die. If the result is 1-4 there is no effect. If the result is 5-6, the following applies for the turn.
 - ◊ Germany, Italy, and UK cannot use their Tanks marker.
 - ◊ Italy cannot flip a reduced field ground unit to its full side. It also cannot mobilize a unit.
- Each turn, after calculating Germany's and France's initial production points, each faction rolls a die, divides its result by 2 (round up) and reduces its country's production points by its modified result. That is, the Axis result affects Germany, the Western result affects France. *This simulates a variable impact due to strategic warfare and fighting on other fronts.*

Optional Play Balance Rules:

Pro-Axis:

- If the first turn's weather is not Fair, the second turn is Fair.
- After setup, the Axis faction removes one German infantry unit from the scenario and replaces it with the 5 Pz unit.
- The Axis faction adds the Afrika unit to its setup. Put it in any hex in Germany that does not violate stacking limits.

Pro-Western:

- If the first turn's weather is Fair, the second turn is Poor.
- After setup, the Axis faction removes one German tank unit of its choice from the scenario. It may then take one German ground unit from its current location and put it where the tank unit was.
- Replace the Netherlands unit on the map with the What if (Yellow triangle) unit. Put the original Netherlands unit in the Faction Card's Western Mobilization box.
- Put the What if (yellow triangle) Belgium unit in the Faction Card's Western Mobilization box.
- Put the What if (yellow triangle) French units in the Faction Card's Western Mobilization box. *This adds more Mobile units, but they are more expensive to activate and replace.*

Fixed Weather:

- The weather in May is Poor and June is Fair.

21.4.2 Axis Faction

Active Countries:

Germany: National Will = NA. Production = 22

Italy: National Will = NA. Production = NA

Special Rules/Notes:

- In the first turn's Operations Phase, the Axis faction must attack or move into Belgium, Netherlands, or France.
- The Axis faction cannot perform an Amphibious Invasion and it cannot put the Airdrop marker in Great Britain.
- Hexes 3521 and 3620 (in Italy) are considered German and Italian Unlimited Supply Sources. Also, a city in Germany is considered an Italian Unlimited Supply Source.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Axis	Strategic Move	Events			
Germany	Airdrop	Events			
Germany	Tanks	Events			
Germany	1	3020			
Germany	2	2921			
Germany	4	2819			
Germany	6	3121			
Germany	7	2719			
Germany	8	2820			
Germany	9	2920			
Germany	10	2619			
Germany	1 Pz	2818			
Germany	2 Pz	2919			
Germany	1 Luf	2719			
Germany	2 Luf	2818			
Germany	3 Luf	2619			
Italy	Tanks	Events			
Italy	1	3520			
Italy	2	3620			

21.4.3 Western Faction

Active Countries:

Belgium: National Will = 2. Production = 1.

France: National Will = 30. Production = 11 + 2 per Factory.

Netherlands: National Will = 2. Production = 1.

UK: National Will = NA. Production = NA.

Special Rules/Notes:

- At the start of the scenario, a France ground unit located in the same hex as a fort sets up occupying it.
- At the end of the May-41 Axis Operations Phase, put the France 2 Air unit in a friendly city in France. Placement cannot violate Stacking Limits. Mark it with 4 Sorties. It has Full Supply.
- A UK air unit that performs an Air Rebase action must end its movement within three hexes of, or within, Great Britain.
Example: Hex 2814 is three hexes away; 2815 is not.
- The Western faction cannot perform an Amphibious Invasion into or adjacent to a port in Belgium or Netherlands. It can perform naval transport to a friendly port in Belgium or Netherlands.
- Only a ground unit in the Western Mediterranean Box can perform an Amphibious Invasion into or adjacent to Marseille. Also, a ground unit in Marseille cannot perform an Amphibious Invasion.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Belgium	1	2717			
France	2x Tanks	Events			
France	1 Tank	2815			
France	3	3017			
France	4	3018			
France	5	3019			
France	6	3117			
France	8	3120			
France	10	3014			
France	3 N. Afr	3817			
France	1 Gd	2916

21.5 Balkans 1941

This covers the Axis invasion of Yugoslavia and Greece.

21.5.1 Basics

Maps Used: Balkans

Scenario Length: 2 turns. Apr 1941 to May 1941.

Victory Conditions: The Axis faction wins if Greece and Yugoslavia are conquered by the end of the final turn. Otherwise, the Western faction wins.

Control Markers: None at start

Special Rules/Notes:

- There is no Strategic Movement Phase.
- When determining the weather for April, roll on the Apr (Mar Sev) row. Reminder: this map uses the Balkans, FNA, Italy side of the Weather table.

Optional Play Balance Rules:

Pro-Axis:

- If the first turn's weather is Poor, the second turn is Fair.
- Put the Axis SNAFU in the Faction Card's Axis Events box.

Pro-Western:

- If the first turn's weather is Fair, the second turn is Poor.
- Put the Western SNAFU in the Faction Card's Western Events box.

21.5.2 Axis Faction

Active Countries:

Bulgaria: National Will = NA. Production = NA

Germany: National Will = NA. Production = NA

Hungary: National Will = NA. Production = NA

Italy: National Will = NA. Production = NA

Romania: National Will = NA Production = NA

Special Rules/Notes:

- There are no Romanian units in the scenario, but Romania is considered an active Axis country.
- Albania is considered part of Italy.
- The Axis faction may use one Axis friendly port in Italy or Yugoslavia as an Unlimited Supply Source for up to three Axis units. It is the Axis faction's choice as to which port is used for that turn.
- Any rail hex on the northern edge of the map is an unlimited supply source for German units.
- A German unit can move, retreat, or trace a path through any country. Any other Axis unit cannot move or retreat into a different Axis country, but it can trace a Supply Line path through it. **Example:** A Hungarian unit cannot move into Romania but can trace a Supply Line through it.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Axis	2x Ground Support	Events			
Bulgaria	5	3837			
Germany	Airdrop	Events			
Germany	2	3329			
Germany	10	4038			
Germany	1 Pz	4037			
Germany	2 Pz	3536			
Germany	2 Luf	3333			
Hungary	3	3432			
Italy	2	3527			
Italy	9	4134			
Italy	11	4233			

21.5.3 Western Faction

Active Countries:

Greece: National Will = 4. Production = 1.

UK: National Will = NA. Production = NA

Yugoslavia: National Will = 6. Production = 2.

Special Rules/Notes:

- A Western unit cannot move into an Axis country, but it does exert a ZOC into it.

Setup:

Country	Counter ID	Location	Entry-H	R	S
Greece	1	4234			
Greece	2	4138			
UK	BEF	4236			
Yugoslavia	1	3532			
Yugoslavia	2	3629			
Yugoslavia	3	3832			
Yugoslavia	4	3429			
Yugoslavia	5	3835			
Yugoslavia	6	3634			
Western	2x Ground Support	Events			

21.6 French North Africa 1942-1943

This covers the Allied invasion of French North Africa.

21.6.1 Basics

Maps Used: West

Scenario Length: 8 turns. Nov-42 to Jun-43

Victory Conditions: The Axis faction wins in any Victory Phase if there is no Allied ground unit in French North Africa. Otherwise, it wins if the Western faction does not win by the end of the final turn.

The Western faction wins if all cities within French North Africa are under Western control by the end of the final turn.

Competitive Victory Conditions: Play with the following changes:

- Use the Fixed Weather option below.
- Choose the result of the French North Africa roll in the second bullet of the Special Rules/Notes below. You may choose either result, but when playing the game after switching factions, use the same result.
- If at any point the Western faction controls all cities within French North Africa, note the turn the last city was put under its control and record the result for that player.
- At the end of the scenario, if the Axis faction won the scenario, count the number of cities under its control and record the result for that player.
- Players switch factions and play again with these changes.
 - ◊ If only one player won either game as the Axis faction, that player wins. If both players won as the Axis faction, the player that had more cities under Axis control wins.
 - ◊ If both players won as the Western faction, whoever won in an earlier turn wins. Anything else is a draw.

Control Markers: None at start

Special Rules/Notes:

- Before Feb-43, a unit or marker cannot move, retreat, or be put in a hex that is south of hex row 50xx and east of hex column xx20 (i.e., southeast French North Africa and Libya). Put the Axis and Western Scenario Event-Rule markers in this area to serve as a reminder and then remove them in Feb-43.
- Before setting up units, roll a die.
 - ◊ If the result is 1-2, French North Africa is an active Axis country and the Axis faction puts each of its ground units at full strength and Full Supply in any city in French North Africa, except hex 4622. Axis faction's choice of location. Placement cannot violate Stacking Limits.
 - ◊ If the result is 3-6, French North Africa counters are not used in the scenario. French North Africa is considered conquered by the Western faction, but all its cities start under Axis control. *This represents negotiations that convince FNA forces to not resist.*
- When determining the weather for Nov, roll on the Nov (Oct Poor) row.

Optional Play Balance Rules:

Pro-Axis:

- French North Africa sets up as an active Axis country. Do not roll for it as per its Special Rule.
- Put the Axis SNAFU in the Faction Card's Axis Events box.

Pro-Western:

- Put the Western SNAFU in the Faction Card's Western Events box.
- Start the Western Free Forces and ULTRA markers in the Faction Card's Western Events box.

Fixed Weather:

Turn	Weather
Nov-Dec-42	Poor
Jan-43	Severe
Feb-43	Poor
Mar-43	Fair
Apr-43	Severe
May-Jun-43	Fair

21.6.2 Axis Faction

Active Countries:

Germany: National Will = NA Production = NA

French North Africa (if active): National Will = 5. Production = 2

Italy: National Will = NA. Production = NA

Special Rules/Notes:

- The German 5 Pz unit cannot be activated on the first turn. *Historically, it moved to Tunis in November.*
- An Axis unit cannot use Naval Transport.
- The Italian 1 unit enters play by activating it during an Axis Operations Phase. If French North Africa is conquered, it can be placed in a friendly: Gabes or Tunis. Placement cannot violate stacking limits. If it cannot be placed or the Axis faction chooses to not place it, its placement is delayed (as often as needed) until the following turn. It cannot move on the turn it is placed.
- If a German or Italian ground unit is eliminated, it is removed from the scenario.
- To represent air support from a German fighter unit, Germany receives two free fighter sorties per turn to allow for Air Support actions. The hex of origin is hex 4526.

To track these, put a 4 Sorties marker in the hex. If committed to ground combat and a Western air unit is not committed to the same ground combat, add one to the Sorties total. If a Western air unit is committed to the same combat, fight an air combat as per the standard rules.

In the Replacements phase, replace whatever Sorties marker is in hex 4526 with a 4 Sorties marker.

The Western faction cannot perform an Air Strike against this hex.

- Per standard Supply rules, a friendly French North Africa city is an Unlimited Supply Source for French North African units. Also, a friendly Tunis is a Limited Supply Source (LSS) for up to two German and/or Italian units. That is two in total.

In addition, a German or Italian unit can attempt to get Full Supply by tracing a Supply Line (7.4.1) to a friendly: Gabes or Tunis and rolling a die. If the die result is 1-3, that unit is in Full Supply. Otherwise, the unit's current supply state is reduced as per standard Supply rules. *This simulates an attempt to get supply overseas from Italy and Germany.*

A unit can only make one Full Supply roll per turn. Attempting to get Full Supply does not prevent a unit from using Tunis as an LSS.

Setup:

Country	Counter ID	Location	Entry-H	R	S

Italy	1	Sp Rules	Feb-43		

21.6.3 Western Faction

Active Countries:

UK: National Will = NA. Production = NA

USA: National Will = NA. Production = NA

Special Rules/Notes:

- Before setting up Western units, roll one die each for the Free Forces and ULTRA markers. Put that marker a number of turns later on the Turn Track equal to its result.
- The Western faction's first two actions of the scenario are to activate the UK 1 Canada and USA Tsk Frc units. Each unit then performs an Amphibious Invasion of the Casablanca, Oran, or Algiers port hex (i.e., the hex containing the port, not an adjacent one) with the following change to the Amphibious Invasion Resolution rules.
 - ◊ If there is an Axis ground unit in the invasion hex, roll a die. If the result is 1-3, apply the ground combat DR result to the Axis unit. If the result is 4-6, apply the ground combat DD result to it. The Western unit is placed in the invasion hex and its activation ends. *Amphibious invasions are automatically successful.*
 - ◊ If there is no Axis unit in the hex, follow standard rules.

It is the Western faction's choice as to which unit invades which port hex, but the same hex cannot be invaded twice. Also complete one unit's activation before activating the other.

Setup:

21.7 Italy 1943-44

This scenario covers the Allied campaign to knock Italy out of the war, and exploit the “soft underbelly” of Europe, a phrase attributed to Churchill. The Allies instead found tough mountain and city fighting with advances reminiscent of World War 1 rather than the sweeping actions of World War 2.

Both the Western Allies and Axis could have diverted additional forces to this theater. Indeed, if the Western Allies had committed more and achieved an early, major breakthrough, the Germans would have certainly responded with additional forces. However, both sides considered this a secondary theater to the inevitable future campaign to liberate France.

Rather than speculate on hypothetical, increasing force commitments, the scenario challenges both sides to do what they can with what they have. It covers the longest time period in the game, so the players will experience a year and a half of action and the significant impact that weather has on operations.

Though this scenario is long, most turns will be played quickly. There are fewer activations each turn than in other scenarios.

Anzio: The game's scale does not allow for a good simulation of the Anzio landings and campaign. Those looking to recreate that should look to other wargames.

21.7.1 Basics

Reminders: Here are some reminders that may help during play.

- Review the different Supply Source rules (7.3).
- A used USA Surprise Attack marker is put four turns later on the Turn Track. A used UK Surprise Attack marker is removed from the scenario.
- An Amphibious Invasion can be performed into or adjacent to a friendly port. This makes it possible to get a unit to that area without having to first move a friendly unit out of a port.

Example: A USA ground unit is in Trieste, a German ground unit is in 3427, and no units are in hexes 3528 and 3426 (east and northwest of Trieste). Per EZOC movement prohibitions, the USA unit cannot move into either of the empty adjacent hexes, which would allow another Western ground unit to naval transport into Trieste. To improve its situation, the Western

faction uses a ground unit in the Central Mediterranean Box to perform an Amphibious Invasion of 3528. Now two Western units are supporting each other around Trieste.

Setting the Stage: Before the start of the scenario, players decide if they want an *Exclude-Italy* or *Include-Italy* opening. Setup and rules that are specific to each will be labeled with those titles. If playing this scenario for the first time, *Exclude-Italy* is the recommended choice.

Exclude-Italy: The scenario starts one turn later with the Western faction having already successfully invaded, collapsed, and conquered Italy (with most of Italy still under Axis control). This scenario reduces setup time and watching Italian counters being removed almost immediately after being set up.

Include-Italy: Italy starts one turn earlier with Italy as an active country on the verge of collapse and the Western faction set up to invade it. This scenario provides the Western faction with more flexibility in deciding when and where to invade.

Scenario Length:

Exclude-Italy: 14 turns. Aug 1943 to Sep 1944

Include-Italy: 15 turns. July 1943 to Sep 1944

Maps Used: Italy

Graniti: This reference location in Sicily is not a city and is ignored for all game purposes. *It's there because that is where the designer, Sal Vasta's parents are from. It's good to be the designer.*

Victory Conditions: Starting in Sep 1943, the Axis Faction wins if the Western faction controls no cities outside of French North Africa. The Axis faction can also win at the end of the game if the Western faction does not win the scenario.

Before Jun-44: The Western faction wins if the Axis faction controls four or fewer cities in Italy, Sardinia, and Sicily.

On or After Jun-44: If the Western faction does not use a Surprise Attack marker on any turn on or after Jun-44, it wins per the above. If it does use a Surprise Attack marker, it wins if the Axis faction controls three or fewer cities in those locations.

Competitive Victory Conditions: Play with the following changes:

- Use the Fixed Weather option below.
- If at any point the Western faction wins per the standard victory conditions, note the turn and record the result for that player.
- Players switch factions and play again with these changes. If only one player won either game as the Axis faction, that player wins. If both players won as the Western faction, whoever wins as the Western faction earlier wins. Anything else is a draw.

Control Markers:

Exclude-Italy: Western Control in hex 4622. That is the only one.

Include-Italy: Western Control in hex 4622. More Western Control markers are placed per its Setup Table.

Special Rules/Notes:

- Yugoslavia and Vichy France (Corsica) are conquered Western countries. All cities within these locations are considered Axis controlled unless they contain a Western Control marker.
- **Exclude-Italy:** Italy is a conquered Axis country.

Play Balance Rules:**Pro-Axis:**

- **Axis Setup:** Put the Germany 5 Gar unit in the Faction Card's Axis Mobilization box.
- **Axis Setup:** Put the Germany Afrika unit in the Faction Card's Axis Mobilization box.
- **Change rule 21.7.3, last bullet, as follows:** Starting Mar-44, Western faction needs to roll a 1 to use the listed markers.
- **Include-Italy:** Increase Italy's National Will to 7.

Pro-Western:

- **Western Setup:** Put the USA 1 French unit in the Mar-44 box of the Turn Track. When removed from the Turn Track, put it in Faction Card's Western Mobilization box.
- **Change rule 21.7.3, fourth bullet, as follows:** Starting Mar-44, the Western faction needs to roll a 1-3 to use the listed markers.

Fixed Weather

Turn	Weather
Aug-Sep-43	Fair
Oct-43	Poor
Nov-43	Fair
Dec-43	Severe
Jan-Apr-44	Poor
May-Sep-44	Fair

21.7.2 Axis Faction**Active Countries:**

Germany: National Will = NA.

Production 1943 to May-44 = NA; Jun-44 to scenario end = 6

Production point tracking starting in Jun-44 represents the limited resources available due to demands in other theaters.

Include-Italy: Italy: National Will = 3. Production = 2/Factory

Special Rules/Notes:

- A hex in Italy or Yugoslavia that contains a Transport Line connecting to a map edge and does not contain a Western: unit or Control marker is considered an Unlimited Supply Source (USS) for a German unit.
- **Example:** Hexes 3720 and 3429, are Unlimited Supply Source hexes. Hexes 3428 and 3729 are not.
- A German leg unit that is eliminated is put in the Faction Card's Axis Mobilization Box instead of the Eliminated Box. *This allows the unit to be mobilized on the same turn. This simulates German forces located beyond Italy's border that could be moved into the area if they were needed.*
- A German unit can be mobilized in any map edge hex that is a German USS hex or is adjacent to such a hex.
- At the start of the Jun-44 turn, the German Tanks marker is removed from the scenario. In addition, the Axis faction tracks production points for Germany until the end of the scenario. *Other fronts pulled resources from this theater.*
- **Include-Italy:** For the first turn's Axis Operations Phase, an Axis unit set up in a port cannot move.

Setup:**Exclude-Italy**

Country	Counter ID	Location	Entry-H	R	S
Axis	Scenario Event-Rule	Sp Rules	Jun-44		
Germany	Prod 1s	Prod Track	Jun-44

Italy	11	Mobilization			
Italy	1 Air	4628			4

21.7.3 Western Faction**Active Countries:**

UK: National Will = NA. Production = NA. Jun-44 to scenario end = 6

US: National Will = NA. Production = NA.

Special Rules/Notes:

- A UK or USA unit is mobilized in any Transport Line hex in French North Africa or in the Central Mediterranean Map Box.
- At the start of the Aug-43 turn, remove the US/UK Air Drop marker from the scenario.
- At the start of the Mar-44 turn, one USA Surprise Attack marker is removed from the scenario. Western faction's choice as to which USA marker is removed. *Allied amphibious assets shift to the upcoming invasions of France.*
- Starting with the Jun-44 turn, each time the Western faction wants to use a Free Forces or ULTRA marker in its Faction Card's Events Box, it rolls a die. On a result of 1-2, it may use that marker. On a result of 3-6, it cannot be used, and the marker

is put in the next turn on the Turn Track. *After landing in France, Allied High Command prioritized it over Italy.*

- Starting with the Jun-44 turn, if the Western faction uses a Surprise Attack marker, its ability to win becomes harder. See Victory Conditions above. *Allied High Command would have expected greater results if it allowed another major amphibious operation in Italy over France.*
- Amphibious Invasion Zones**

The following restrictions reflect the geographic limitations on naval operations in the region.

A ground unit's location limits where it can perform an Amphibious Invasion. The following Zone images highlight the ports where the invading unit can be, and which ports (or their adjacent coastal hexes) it can invade. Arrows pointing out of a port hex indicate which adjacent coastal hex may be invaded.

Example: In the East Zone, a ground unit in Taranto can invade Venice (or a coastal hex adjacent it). Similarly, a unit in Venice can invade Taranto (or a coastal hex adjacent it).

The same port can be in multiple Zones.

Example: Taranto is in the East Zone, the Catania East Zone, and Central Mediterranean Zone.

Zones are exclusive of each other. Only highlighted locations in the same Zone can invade each other.

Examples: In the Catania East Zone, a ground unit in Taranto can invade Catania (and vice-versa).

In the Catania West Zone, a unit in Catania can invade Cagliari (and vice versa).

No Zone contains both Taranto and Cagliari highlighted so a unit in Taranto cannot invade Cagliari (or vice versa).

The Central Mediterranean Zone only applies if the invading unit is located in Central Mediterranean Map Box.

Important: Only one Amphibious Invasion per turn can be performed from the Central Mediterranean Map Box.

East Zone

Catania West Zone

Note where some coastal hexes adjacent to a port do not have an arrow point into them.

Catania East Zone

Note no arrows point out of Brindisi into an adjacent hex.

West Zone

Note no arrows point out of Tunis into an adjacent hex.

The highlighted hexes are also part of the French North Africa Zone.

Central Mediterranean Zone

Only applies to a unit located in the Central Mediterranean Box that is invading into one of the highlighted locations.

Important: Only one Amphibious Invasion per turn can be performed from the Central Mediterranean Map Box.

Setup:

- Before setting up Western units, roll one die each for the Free Forces and ULTRA markers. If playing Exclude-Italy, subtract one from each result. Put that marker a number of turns later on the Turn Track equal to the final result. If the roll was one, put the marker in the Western FC's Events box.

Exclude Italy: After Axis forces are set up, the Western faction sets up the following. If more than one placement location is available, it is the Western faction's choice. Placement cannot violate Stacking Limits. *Historically, Sicily was invaded by UK and USA forces.*

- The UK 8 ground unit, the 1 RAF air unit with 2 Sorties, and a Western control marker are put in a single highlighted port in the West Zone or Catania East Zone that does not contain an Axis unit.
- The USA 5 ground unit, the 9 AAF air unit with 2 Sorties, and a Western control marker are put in a single highlighted port in the West Zone or Catania West Zone that does not contain an Axis unit.
- On the Turn Track, put one USA Surprise Attack marker in the Sep-43 box and the other in the Nov-43 box.
- After setting up the above, any remaining counters listed in the Include-Italy Setup are put in their locations, except for the UK Surprise Attack and UK/USA Airdrop markers, which are removed from the scenario.

Include-Italy:

Country	Counter ID	Location	Entry-H	R	S

21.8 France 1944

This covers the Allied invasion of France. Known in France as the *Débarquement de Normandie*.

21.8.1 Basics

Scenario Length: 4 turns. Jun 1944 to Sep 1944.

Maps Used: France

Victory Conditions: The Western faction wins if the Axis faction controls a total of six or fewer cities in Belgium, Netherlands, Occupied France, and Vichy. If the Western faction does not win, the Axis faction wins.

Western control of a German city does not impact the above city count. *This simulates Western goals of liberating France and the Low Countries.*

Competitive Victory Conditions: Play with the following changes:

- If the Western faction achieves the standard victory conditions before the last turn, end the scenario and record the winning turn for that player. Also, count the number of cities outside of Germany under Axis control and record the result for that player.
- If the Western faction does not win before the last turn, at the end of the scenario (regardless of who won), count the number of cities outside of Germany under Axis control and record the result for that player.
- Players switch factions and play again with the above changes.
 - ◊ If the Western faction wins again before the last turn, compare the winning turn of both games. Whoever won earlier, wins.
 - ◊ If both Western faction players won on the same turn, or both games were played through the last turn (regardless of who won), whichever player controlled more Axis cities wins. Anything else is a draw.

Control Markers:

All cities in Belgium, Netherlands, Occupied France, and Vichy are Axis controlled. All cities within these locations are considered Axis controlled unless they contain a Western Control marker.

Special Rules/Notes:

- The first turn's weather is Fair.
- The Alsace-Lorraine Disputed Area is considered part of Germany. Therefore, the Area's cities can supply German units and serve as Mobilization Locations. *An Axis Control marker in hex 3019 can serve as a reminder.*
- The hexes in Italy are prohibited for all purposes.
- The following countries are considered conquered Western countries: Belgium, Netherlands, Occupied France, and Vichy.

Optional Play Balance Rules

Pro-Axis

- The first turn's Weather is Poor.
- Put the Axis SNAFU in the Faction Card's Axis Events box.
- Put the Rockets marker in the Faction Card's Axis Events box.

Pro-Western

- Put the Western SNAFU in the Faction Card's Western Events box.
- Ignore one or more of the Western Special Rules affecting a bomber unit.

21.8.2 Axis Faction

Active Countries:

Germany: National Will = NA. Production = 12

Special Rules/Notes:

- For the first turn's Axis Operations Phase, a German unit set up in a port cannot move.
- Each turn, after calculating Germany's initial production points, the Axis faction rolls a die and reduces them by the result. *This simulates a variable impact due to strategic warfare and fighting on other fronts.*

Setup:

Country	Counter ID	Location	Entry-H	R	S
Axis	Strategic Move	Events			
Germany	Jets	Events			
Germany	Tanks	Events			
Germany	1	3610			
Germany	6	2716

Germany	3 Gar	2912			
Germany	4 Gar	2910			
Germany	5 Gar	3107			
Germany	7 Gar	Mobilization			

21.8.3 Western Faction

Active Countries:

UK: National Will = NA. Production = NA

USA: National Will = NA. Production = NA

Special Rules/Notes:

- A bomber that performs Air Rebase cannot end its movement outside of Great Britain.
- A bomber unit cannot be eliminated.
- In the Replacements Phase, no more than 1 Sortie is removed from each bomber unit. *That is one each, not one in total. This reflects the limited number of bombers available for operational support.*
- An Amphibious Invasion into or adjacent to Marseille cannot be performed *except* by a ground unit in the Western Mediterranean Box.

Setup:

Country	Counter ID	Location	Entry-H	R	S
UK	Naval Evac	Events			
UK	Surprise Attack	Events

21.9 France-Italy 1944

This scenario covers the campaigns in the France and Italy in 1944. It gives both factions limited ability to shift forces between fronts.

21.9.1 Basics

Scenario Length: 4 turns. June 1944 to Sep 1944

Maps Used: France and Italy

Victory Conditions: The Western faction wins if all of the following conditions exist at the end of the final turn.

- The Axis faction controls a total of six or fewer cities in Belgium, Netherlands, Occupied France, and Vichy.
- The Axis faction controls a total of five or fewer cities in Italy, Sardinia, and Sicily.

If the Western faction does not win, the Axis faction wins.

Competitive Victory Conditions: Play with the following changes:

- If at any point the Western faction achieves its standard victory conditions before the last turn, end the scenario and record the winning turn for that player.
- If the Western faction does not win before the last turn, at the end of the scenario (regardless of who won), count the number of cities under Axis control and record the result for that player.
- Players switch factions and play again with the above changes.
 - ◊ If the Western faction wins again before the last turn, compare the winning turn of both games. Whoever won earlier, wins.
 - ◊ If both Western faction players won on the same turn, or both games were played through the last turn (regardless of who won), whichever player controlled more Axis cities wins. Anything else is a draw.

Control Markers:

Brindisi, Naples, Taranto, and all cities in Britain, Corsica, Sardinia, Sicily, and French North Africa are Western controlled. All other cities are Axis controlled. Instead of putting Axis Control markers in those hexes, put Western Control markers in them as each goes under Western control.

Special Rules/Notes:

- A faction's events markers can be used on either map.
- The first turn's weather is Fair on both maps.
- For the Oct-Dec turns, the Axis faction rolls twice when determining the weather each turn. The first roll determines the weather for the France map, excluding the shared hexes. The second roll determines the weather for the Italy map, including the shared hexes. *Note that weather specific combat DRM are usually based on the defender's hex, regardless of the weather in the attacker's hex.*
- The following countries are considered conquered Western countries: Belgium, Italy, Netherlands, Occupied France, and Vichy.
- The Alsace-Lorraine Disputed Area is considered part of Germany. Therefore, the Area's cities can supply German units and serve as Mobilization Locations. *An Axis Control marker in hex 3019 can serve as a reminder.*
- **Shared Hexes:** Hexes 3420, 3520, 3521, 3620, and 3720 are five shared hexes in northwestern Italy that are the same on both the France and Italy maps. These hexes bridge both maps as follows. A unit, marker, or any game rule for being in one of the shared hexes on either map simultaneously exists on both maps. *It does not matter which map you use, just remember it's on both maps at the same time.*

The shared hexes allow combat, movement, tracing paths and ranges to go between and across both maps.

Examples: A German ground unit in Turin (hex 3520) on the Italy map also exists in Turin on the France map, extending its ZOC into France on the France map. Another German ground unit cannot end its movement in Turin on the France map because that would violate Stacking Limits.

A German air unit in Turin on the France map can provide Air Support to a ground combat within five hexes of its location on either map. Similarly, it can be the target of an Air Strike by a Western air unit within seven hexes on either map.

A Western unit in hex 3518 on the France map can trace a supply line into 3519 and then along the Transport Line connecting back to the Western controlled port of Genoa (hex 3621) on the Italy map.

The Axis faction puts its Strategic Move marker on a German ground unit in Paris on the France map. It then moves along the Transport Line connecting to Metz, Strasburg, hex 3020, and then onto the Italy map in hex 3424 along the Transport Line connecting, Venice, Bologna, and ending its strategic movement in hex 3927.

Optional Play Balance Rules**Pro-Axis**

- The first turn's Weather is Poor.
- Put the Axis SNAFU in the Faction Card's Axis Events box.
- Put the Rockets marker in the Faction Card's Axis Events box.

Pro-Western

- Put the Western SNAFU in the Faction Card's Western Events box.
- Ignore one or more of the Western Special Rules affecting a bomber unit.

21.9.2 Axis Faction**Active Countries:**

Germany: National Will = NA. Production = 18

Special Rules/Notes:

- For the first turn's Axis Operations Phase, an Axis unit set up in a port cannot move.
- Each turn, after calculating Germany's initial production points, the Axis faction rolls a die and reduces them by the result. *This simulates a variable impact due to strategic warfare and fighting on other fronts.*
- A hex in Italy or Yugoslavia that contains a Transport Line connecting to the northern or eastern map edge and does not contain a Western unit or Control marker is considered a German Unlimited Supply Source (USS). Ignore the supply hex images on the western map edge in the shared hexes.
Example: Hexes 3424, 3433, and 3534 are German Unlimited Supply Source hexes. Hexes 3426-3428 are not.
- On the Italy map, a German unit can be mobilized in any map edge hex that is a German USS hex or is adjacent to that hex.
- Unlike in the Italy 1943-1944 scenario, an eliminated German unit is put in the Faction Card's Axis Eliminated Box (per standard rules).

Setup:

Country	Counter ID	Location	Entry-H	R	S
Axis	Strategic Move	Events			
Germany	Jets	Events			
Germany	Tanks	Events			
Germany	1	3610			
Germany	4	3926			
Germany	6	2716

Germany	8	Mobilization			
Germany	7 Gar	Mobilization			

21.9.3 Western Faction

Active Countries:

UK: National Will = NA. Production = 15

USA: National Will = NA. Production = NA

Special Rules/Notes:

- A bomber that performs Air Rebase cannot end its movement outside of Great Britain.
- In the Replacements Phase, no more than 1 Sortie is removed from each bomber unit. That is one each, not one in total. *This reflects the limited number of bombers available for operational support.*
- A unit may use Naval Transport to move between ports and/or Mediterranean Boxes on both maps.
- An air unit in Ajaccio on the Italy map can provide Air Support in a ground combat on the France map if the defender is in one of the following hexes: 3519, 3618, 3619, 3718, 3719, 3817, or 3818.

Amphibious Invasion Zones:

On the Italy map, the Amphibious Invasion Zones rule from the Italy 1943-1944 scenario (21.7.3) is used.

On the France map, an Amphibious Invasion into or adjacent to a port on that map can only be performed by unit that is on that map.

[Exception: Marseille: This port and its adjacent hexes can be invaded by a unit in the Western Mediterranean Box or in a port in Italy's West Zone. Also, a unit in Marseille can perform an invasion in Italy's West Zone.]

Setup:

Country	Counter ID	Location	Entry-H	R	S
